

KettenWulf is a developer and manufacturer of chains and sprockets provides tailor-made solutions in the conveyor and drive engineering sector.

Since the individual requirements of every customer are different, KettenWulf provides customized product solutions for all industries. Our engineers and technicians develop special chain systems, adapted to suit specific environmental conditions.

Production and management processes certified in accordance with DIN EN ISO 9001:2008, together with the KettenWulf Competence Center in Kückelheim, ensure that KettenWulf's high-quality standards are adhered to all around the world. Specialist engineers at the Competence Center offer their expert knowledge for our top-class product developments worldwide. Almost every industry benefits from our knowledge.

Wherever things need to be moved, conveyor or drive technology is involved. We commit our expertise and **90 years** of experience to the development of high-quality products in order to enhance product performance and service life.

We are partners to all sectors of the industry. For example: In the steel production. Our conveyor chains move multi-ton steel coils at a temperature of 1,000 ÅC precisely and reliably through the various production stages.
